RWAlpha | Token Issuance Document

Structured RWA Product Matrix

rAI / rAIX / rSTR

Comprehensive Product Whitepaper

Issuer	RWAlpha (Onchain GP Limited, BVI)
Product Line	rAI / rAIX / rSTR
Underlying Assets	Structured ETF / Preferred Stock
Tech Standard	BNB Chain / Mantle Network
Issue Date	May 2026

01

RWAlpha Structured RWA Product Overview

RWAlpha is committed to tokenizing premium assets from traditional financial markets through blockchain technology, providing Web3 investors with secure, transparent, and efficient on-chain yield solutions. This whitepaper covers three core structured RWA products issued by RWAlpha: rAI, rAIX, and rSTR. Each product is designed for different risk appetites and return objectives, with all underlying assets backed by strictly regulated traditional financial instruments.

1.1 rAI: Structured Yield RWA Token

rAI is a structured yield RWA token focused on AI tech income: Nasdaq-100 plus Nvidia options with steady weekly payouts.

Underlying Asset Allocation: QQQI 75% + NVDY 25%.

Yield Strategy: Allocates to Nasdaq-100 option ETFs and Nvidia option ETFs, using covered-call strategies to support steady weekly payouts. QQQI manages more than $11.8B, while NVDY has delivered a 61.28% annualized return since inception; the underlying liquidity is deep and payout support is reliable. 75% anchors Nasdaq-100 growth, while 25% adds Nvidia option acceleration, aiming to keep up with upside while option premiums cushion downside.

Key Metrics: Net Dividend 14.5% | Net Total Return +17.2% | Underlying AUM $13.1B.

Expected Return: Target annualized net return of 13–16% (net of fees).

Dividend Frequency: Weekly payout.

1.1.1 Underlying ETF Basic Information

QQQI — NEOS Nasdaq 100® High Income ETF

Fund Parameters	Details
Issuer	NEOS Investments
Inception Date	January 29, 2024
Exchange	NASDAQ
Underlying	Nasdaq 100® Index
Option Strategy	Actively managed data-driven covered call (NDX index options, Section 1256)
Distribution Frequency	Monthly
Expense Ratio	0.68% p.a.

AUM (As of May 2026)	Approx. $11 Billion (~$11B)
Annualized Dividend Yield	Approx. 14.32% (As of Mar 31, 2026)

NVDY — YieldMax™ NVDA Option Income Strategy ETF

Fund Parameters	Details
Issuer	YieldMax ETFs (Tidal Financial Group)
Inception Date	May 10, 2023
Underlying	NVIDIA Corp. (NVDA)
Option Strategy	Actively managed weekly NVDA call spread options
Distribution Frequency	Weekly
Expense Ratio	0.99% p.a.
AUM (As of Apr 2026)	Approx. $1.44 Billion
Annualized Dividend Yield	Approx. 52.17% (As of Apr 22, 2026)

1.2 rAIX (rAI Max): Enhanced Structured Yield RWA Token

rAIX (rAI Max) is the enhanced version of rAI, combining weekly option income, AI memory supercycle growth, and broad tech exposure into a five-asset portfolio, targeting both yield and capital appreciation.

Underlying Asset Allocation: NVDY 30% + QQQI 20% + DRAM 20% + VGT 20% + SGOV 10%.

Yield Strategy: Adds DRAM, VGT, and SGOV on top of rAI's weekly income base, combining option income, AI memory growth, broad tech exposure, and a treasury buffer. DRAM targets the AI memory supercycle, VGT provides broad technology beta, and SGOV adds a short-duration treasury cushion to diversify risk. 60% of the basket contributes cash flow through NVDY and QQQI option income plus SGOV treasury income, while 40% focuses on growth.

Key Metrics: Net Dividend 11.2% | Net Total Return +37.1% | Underlying AUM $286.2B.

Expected Return: Target annualized net return of 12–14% (net of fees).

Dividend Frequency: Weekly payout.

1.2.1 Underlying ETF Basic Information

NVDY — YieldMax™ NVDA Option Income Strategy ETF (30%)

Fund Parameters	Details
Issuer	YieldMax ETFs (Tidal Financial Group)
Inception Date	May 10, 2023

Underlying	NVIDIA Corp. (NVDA)
Option Strategy	Actively managed weekly NVDA call spread options
Distribution Frequency	Weekly (30% in rAIX)
Expense Ratio	0.99% p.a.
AUM (As of Apr 2026)	Approx. $1.44 Billion
Annualized Dividend Yield	Approx. 52.17% (As of Apr 22, 2026)

QQQI — NEOS Nasdaq 100® High Income ETF (20%)

Fund Parameters	Details
Issuer	NEOS Investments
Inception Date	January 29, 2024
Exchange	NASDAQ
Underlying	Nasdaq 100® Index
Option Strategy	Actively managed data-driven covered call (NDX index options, Section 1256)
Distribution Frequency	Monthly (20% in rAIX)
Expense Ratio	0.68% p.a.
AUM (As of May 2026)	Approx. $11 Billion (~$11B)
Annualized Dividend Yield	Approx. 14.32% (As of Mar 31, 2026)

DRAM — Roundhill Memory ETF (20%)

Fund Parameters	Details
Issuer	Roundhill Investments
Inception Date	April 2, 2026
Product Positioning	World's first pure memory chip ETF
Core Holdings	SK Hynix, Micron Technology, Samsung Electronics (combined weight ~73%)
Market Coverage	Covers over 95% of the global memory market
AUM (within 43 trading days of inception)	Surpassed $10 Billion (fastest AUM growth record in US ETF history)
Return Since Inception	Approx. 95-99% (As of May 2026)

Distribution Frequency	No dividend (Pure capital appreciation, 20% in rAIX)

VGT — Vanguard Information Technology ETF (20%)

Fund Parameters	Details
Issuer	Vanguard
Inception Date	January 26, 2004
Exchange	NYSE Arca
Underlying Index	MSCI US Investable Market Information Technology 25/50 Index
Core Holdings	Apple, NVIDIA, Microsoft, Broadcom, Meta (top 5 ~65%)
Expense Ratio	0.09% p.a.
AUM (As of Jun 2026)	Approx. $170 Billion
YTD Total Return	Approx. +19.35% (As of Jun 2026)
Distribution Frequency	Quarterly (20% in rAIX, provides broad tech beta)

SGOV — iShares 0-3 Month Treasury Bond ETF (10%)

Fund Parameters	Details
Issuer	BlackRock (iShares)
Inception Date	May 26, 2020
Exchange	NYSE Arca
Underlying Index	ICE 0-3 Month US Treasury Bill Index
Asset Class	Short-duration US Treasury Bills (0-3 month maturity)
Expense Ratio	0.09% p.a.
AUM (As of Jun 2026)	Approx. $91.9 Billion
12m Trailing Yield	Approx. 3.85% (As of Jun 11, 2026)
Distribution Frequency	Monthly (10% in rAIX, treasury cushion to diversify risk)

1.3 rSTR: MicroStrategy Perpetual Preferred Stock Token (Dividend RWA Token)

rSTR is a structured preferred equity token based on MicroStrategy (MSTR) stock, providing investors with fixed high dividend yields while isolating the downside risk of MSTR through overcollateralization.

Underlying Asset Allocation: 100% corresponds to MSTR Cumulative Perpetual Preferred Stock.

Yield Strategy: Relies on MSTR's Bitcoin reserves (reserve coverage ratio of approx. 6x) to provide an ample safety cushion and ensure solvency, with dividend priority over common stock.

Expected Return: Target annualized distribution rate 11.5% (pre-fee).

Dividend Frequency: Monthly payout.

1.3.1 Underlying Preferred Stock Basic Information

STRC — Strategy Inc. Perpetual Preferred Stock (formerly MicroStrategy)

Security Parameters	Details
Issuer	Strategy Inc. (formerly MicroStrategy, Nasdaq listed)
Security Type	Cumulative Perpetual Preferred Stock
Par Value Peg	$100/share, 30-day volatility only 3%
Annualized Dividend Yield	11.5% (Monthly cash dividend)
Dividend Priority	Senior to common stock and all other series of preferred stock (STRK, STRD)
Issued Scale	Over $13.5 Billion (Average daily trading volume $375 Million)
Dividend Record	23 consecutive on-time and full dividend payouts since IPO in July 2025, totaling over $693 Million
BTC Reserve Endorsement	Strategy holds 818,334 BTC (3.88% of global supply), dividend coverage multiple 4.3x
Institutional Custodians	Morgan Stanley, Goldman Sachs, Citi have all integrated trading, custody, and lending services

02

Token Contract Information

RWAlpha products are deployed on BNB Chain and Mantle Network. The following are the vault smart contract addresses for each product. All on-chain operations are publicly transparent and available for real-time audit.

Product Name	Token Symbol	BNB Chain Mainnet Contract Address	Mantle Network Mainnet Contract Address
rAI	rAI	0x5D08B15c4241Cc0C147c65a562f0a5f9C5f9ca04	0xA71262f2c790AB98D14a36e6c533B5b304dEb69c
rAIX	rAIX	0x87837F2466cdce52ffDC0793272075e3D2184f6C	0xc1Ab1a85e1C88b8F6D4c8adc2218960f6efA863b
rSTR	rSTR	0x375AFE5eB0924FA507a32D274692828442441E4E	0xaEbC6191684b0838E46c0113b5741B5f96070028

03

Compliance Framework & Tokenization Engine

To ensure asset liquidity, independent yield distribution, and financial transparency, RWAlpha adopts a fiduciary management system that separates principal and yield, applicable to rAI, rAIX, and rSTR:

3.1 Principal Vault

Function: Exclusively holds underlying ETF or stock positions, corresponding to the base asset value of the tokens.

Proof of Ownership: Underlying assets are held by Onchain GP Limited in licensed brokerage accounts at MOOMOO (Futu Securities) and others.

Audit & Transparency: On-chain mapped assets are held in custody using Fireblocks institutional-grade Multi-Party Computation (MPC) technology, ensuring 1:1 mapping between physical and digital assets.

3.2 Yield Vault

Function: Exclusively receives dividends and option premium income generated by underlying assets.

Fiat Conversion: FOMO Pay (Singapore licensed MPI institution) converts USD dividends to USDT for settlement.

Distribution Mechanism: Automatically executed via smart contracts, with yield periodically distributed to token holders in stablecoin (USDT) form.

3.3 Tokenization Engine Core Mechanism

RWAlpha's proprietary tokenization engine adopts a 'zero-balance contract' design philosophy: smart contracts only manage token minting/burning/accounting, without taking custody of any funds. Any USDT deposited into the contract is immediately transferred to the Fireblocks Vault, ensuring complete separation between user funds and the contract.

Core Features	Detailed Description
Broker API Direct Connection	ETF holding shares and closing prices are automatically retrieved via MOOMOO API. Each rToken corresponds to real ETF underlying positions. Full-chain automated operations, eliminating manual Excel reconciliation.
Three-Wallet Isolation	Fireblocks Vault contains three independent wallets: Inbound / Outbound / Yield, corresponding to subscription funds, redemption funds, and yield funds respectively, achieving fully auditable fund flows.
Three-Layer Approval Chain	Maker 2FA Verification → Checker 2FA Verification → Fireblocks 2/2 Multisig Broadcast. All on-chain fund operations require two separate authorised individuals to each complete 2FA verification, then broadcast via Fireblocks MPC cryptographic multisig, aligning with traditional finance 'Initiate-Review-Approve' processes.
Vault Partner Co-Management	Vault 2/2 multisig permissions are held jointly by RWAlpha and Partner. Neither party can independently move funds, maximizing client asset security.
Smart Dividend Engine	Weighted distribution based on user's valid holdings × holding days, automatically deducting WHT 30% + management fee accrual. Dual-metric APY: current week real-time value and 4-week rolling average.
Multi-Chain Support	Simultaneously launched on BNB Chain and Mantle Network, supporting multi-vault parallel operations, scalable to more public chains in the future.

04

Subscription, Redemption, and Payout Process

4.1 Subscription (Mint Tokens)

User deposits USDT → RWAlpha converts via FOMO Pay → Purchases underlying assets via MOOMOO → Mints equivalent tokens on-chain → Sends tokens to user's Web3 wallet

Settlement Time: The entire process takes approximately T+1 business day (T+3 on weekends).

4.2 Redemption (Burn Tokens)

User submits redemption request, smart contract locks tokens → Sells corresponding underlying assets via MOOMOO → RWAlpha converts to stablecoin via FOMO Pay → USDT sent to user's wallet, tokens simultaneously burned

Settlement Time: The entire process takes approximately T+5 business days (T+7 on weekends).

4.3 Payout Process

Underlying assets distribute yield → MOOMOO transfers yield to RWAlpha account → RWAlpha converts yield to USDT via FOMO Pay → Smart contract calculates each user's proportional share based on holdings → Contract automatically sends distribution to user accounts

Settlement Time: T+1 after the user submits a withdrawal request.

05

Compliance & Institutional Framework

RWAlpha (Onchain GP Limited, BVI entity) is a 100% wholly-owned subsidiary of DMZ Finance (DMZ Fintech Pte. Ltd., Singapore entity). Together, they have built an end-to-end compliant operating framework through a network of licensed institutions:

Role / Partner	Description
Compliant Clearing & Fiat Gateway FOMO Pay	Singapore's first MPI license holder, with shareholders including Singapore Exchange (SGX), providing compliant clearing support for cross-border fund flows.
Securities Brokerage & Custody Management MOOMOO (Futu Securities)	Responsible for executing exchange-traded transactions of underlying assets.
Institutional-Grade Digital Asset Custody Fireblocks	Provides MPC secure custody and asset transfer strategy controls, guarding against systemic operational risks.
Underlying Tokenization Protocol DMZ.finance	• BNB Chain MVB 10 member (2025). • Tokenization partner for QNB (Qatar National Bank). • Technology partner for QCDT, Dubai DIFC's first tokenized money market fund.
Security Audit CertiK	Underlying smart contracts have successfully passed a comprehensive security audit by leading blockchain security firm CertiK, ensuring that code security and reliability meet the highest standards.

06

Fee Structure

Product	Management Fee	Subscription Fee	Redemption Fee
rAI	2% p.a.	Waived	Waived
rAIX	2% p.a.	Waived	Waived
rSTR	0.5% p.a.	Waived	Waived

07

Risk Factors

Risk Factor	Description
Underlying Asset Market Risk	The portfolio is highly concentrated in specific assets; significant price fluctuations will directly impact token NAV. Although rSTR has overcollateralization protection, principal loss risk still exists under extreme market conditions.
Strategy Deviation Risk	In extreme high-volatility or sustained bull market conditions, the covered call strategy may limit upside returns, causing returns to deviate from underlying spot performance.
Smart Contract Risk	Although contract code has been audited, inherent vulnerabilities, hacker attacks, and other technical risks of blockchain technology cannot be completely eliminated.
Legal & Regulatory Risk	Affected by dynamic changes in global regulatory policies, access restrictions in specific jurisdictions may be adjusted in response to applicable regulatory requirements.
