

Structured RWA Product Matrix

rAI / rAIX / rSTR Comprehensive Whitepaper

Structured Yield & Equity RWA Tokens

Issuer	RWAlpha (Onchain GP Limited, BVI)
Network	BNB Chain / Mantle Network
Products	rAI (Stable), rAIX (High Growth), rSTR (Perpetual Pref)
Underlying	US Tech/Memory ETFs, MicroStrategy Equity

01

RWAAlpha Structured Product Matrix Overview

RWAAlpha is dedicated to tokenizing premium assets from traditional financial markets via blockchain technology, providing secure, transparent, and efficient on-chain yield solutions for Web3 investors. This whitepaper covers three core structured RWA products issued by RWAAlpha: rAI, rAIX, and rSTR. Each product is designed for different risk appetites and return objectives, with underlying assets supported by strictly regulated traditional financial instruments.

1. rAI: Structured Yield-Bearing RWA Token

rAI is a structured yield-bearing RWA investment product designed to convert the high volatility of tech stocks into consistent cash flow, providing robust and high dividend payouts.

Underlying Asset Allocation: 75% QQQI (Nasdaq-100 High Income ETF) + 25% NVDY (NVDA Option Income ETF).

Target Yield: 13–16% Annualized Net Yield (Net of Fees).

Distribution Frequency: Weekly.

2. rAIX (rAI Max): Enhanced Structured Yield RWA Token

rAIX employs a dual-engine model combining tech stock option yields with the capital appreciation potential of the global memory chip supercycle, offering extremely high total return expectations.

Underlying Asset Allocation: 50% DRAM (Global Memory Chip ETF) + 35% NVDY + 15% QQQI.

Target Yield: Expected +62% Net Total Return (including capital appreciation and ~14.2% net dividend yield).

Distribution Frequency: Weekly.

3. rSTR: MicroStrategy Perpetual Preferred Stock (Dividend RWA Token)

rSTR is a structured preferred equity token based on MicroStrategy (MSTR) stock, providing investors with fixed high dividend yields while isolating MSTR's downside risk through over-collateralization.

Underlying Asset Allocation: 100% invested in MicroStrategy (MSTR) equity and related derivative strategies.

Target Yield: 20% Annualized Distribution Rate (Net of Fees).

Distribution Frequency: Monthly.

02

Smart Contract Addresses & Vault Information

RWAAlpha's products are deployed on BNB Chain and Mantle Network. Below are the vault smart contract addresses for each product. All on-chain operations are transparent and available for real-time auditing.

Product	Vault Ticker	BNB Chain Mainnet Contract	Mantle Mainnet Contract
rAI	rAI	0x5D08B15c4241Cc0C147c65a562f0a5f9C5f9ca04	0xA71262f2c790AB98D14a36e6c533B5b304dEb69c
rAIX	rAIX	0x87837F2466cdce52ffDC0793272075e3D2184f6C	0xc1Ab1a85e1C88b8F6D4c8adc2218960f6efA863b
rSTR	rSTR	0x375AFE5eB0924FA507a32D274692828442441E4E	0xaEbC6191684b0838E46c0113b5741B5f96070028

03

Asset Segregation & Custody Framework

To ensure asset liquidity, independence of yield distribution, and financial transparency, RWAlpha employs a dual-vault system separating principal and yield, applicable to rAI, rAIX, and rSTR:

3.1 Principal Vault

- Function:** Exclusively holds the underlying ETF or equity positions, corresponding to the base asset value of the tokens.
- Proof of Ownership:** Underlying assets are held by Onchain GP Limited in licensed brokerage accounts such as MOOMOO (Futu Securities).
- Audit & Transparency:** Net Asset Value (NAV) is updated daily/weekly and synchronized to on-chain oracles.

3.2 Yield Vault

- Function:** Exclusively receives dividend and option premium income generated by the underlying assets.
- Distribution Mechanism:** Automatically executed via smart contracts, with yields distributed to token holders periodically in stablecoins (e.g., USDT/USDC).

04

Compliance Framework & Risk Factors

- Compliance Entity:** Onchain GP Limited is incorporated under the laws of the BVI and subject to relevant jurisdictions. All offerings comply with KYC/AML regulations.
- Market Risk:** Underlying assets (tech stocks, memory chips, MSTR) are subject to macroeconomic conditions, industry cycles, and market sentiment, which may cause price volatility. Although rSTR has over-collateralization protection, risk of principal loss still exists under extreme market conditions.
- Smart Contract Risk:** Despite audited contract codes, inherent vulnerabilities in blockchain technology and risks of hacking cannot be completely eliminated.
- Tax Implications:** Yields generated by underlying ETFs and equities are subject to a 30% US Withholding Tax (WHT). The net yields disclosed by RWAlpha have already deducted this tax cost, but investors are still responsible for tax liabilities in their own jurisdictions.
